Civil, Environmental and Hydrogeological Consultants

Re: ***Dam Inspection***

The State of Connecticut recently enacted Public Act 13-197. This new regulation requires that dam owners engage a Professional Engineer to inspect their dams. The Connecticut Department of Energy and Environmental Protection recently mailed notifications to hundreds of dam owners across the state and our records indicate that you are one of those owners. You also may be required to develop or update an Emergency Action Plan for your dam.

Lenard Engineering, Inc. has an experienced staff of engineers, geologists, and scientists that can assist you in all facets of dam work including inspection, design of improvements, preparation of Emergency Action Plans, preparation of Operation and Maintenance Plans, permitting, and construction oversight. Over the last several decades we have worked on hundreds of dam projects across Connecticut and Massachusetts. We are also corporate members of the Association of State Dam Safety Officials. We offer quality service at competitive rates.

While the deadline for most dam inspections is not until March of 2017, we recommend beginning the process early. Inspecting the dam in the spring or early summer can be beneficial before the vegetation begins to obscure critical components of the dam.

With offices in Winsted, Glastonbury, and Storrs, we can readily access all areas of Connecticut. The enclosed brochure provides a concise description of our qualifications and services. To speak to an engineer about your project, or to simply learn more about our firm, please call our Winsted office at 860-379-6669 and ask for Todd Parsons, PE or call our Glastonbury office at 860-659-3100 and ask for James Ericson, PE.

Sincerely,
Lenard Engineering, Inc.

Todd Parsons, P.E.
